

Fire Station www.firestationsoftware.com

An affordable easy to use record keeping computer program for your fire department

Fire Station Quick Start Guide

Step 1: Uninstall demo version of **Fire Station** (if installed)

If you've installed the demo version of **Fire Station**, you will need to uninstall it before installing the full version.

Programs and Features

Go to your computer's **Control Panel** and select **Add or Remove Programs** (Windows XP) or **Programs and Features** (Windows 7).

Scroll through the list until you find **Fire Station** and click on it and choose **Remove** (Windows XP) or click **Uninstall** (Windows 7).

Step 2: Install **Fire Station**

Right-click the **Setup.exe** file and select **Run as administrator**.

ApparatusCheckNotificationServ...	File folder
ExpirationDateNotificationServi...	File folder
[Content_Types].xml	XML File
FireStationSetup.msi	Windows Installer Pa
FS%20Software%20License%20...	Adobe Acrobat Doc
FS_Quick_Start.pdf	Adobe Acrobat Doc
setup.exe	Application

The **Fire Station Setup Wizard** will guide you through the process of installing. Click **Next** to begin.

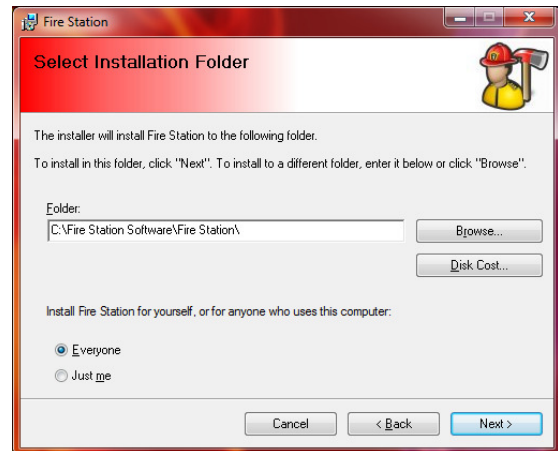

Fire Station www.firestationsoftware.com

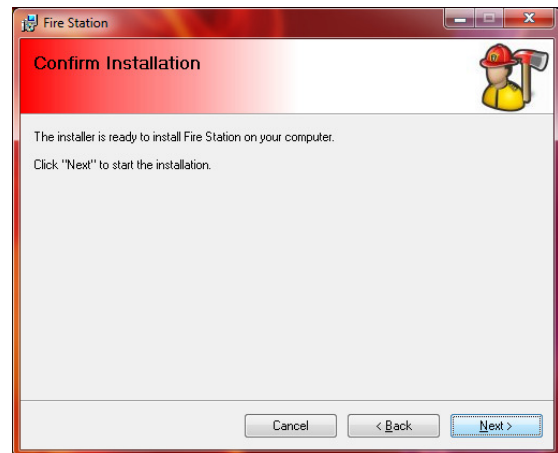

An affordable easy to use record keeping computer program for your fire department

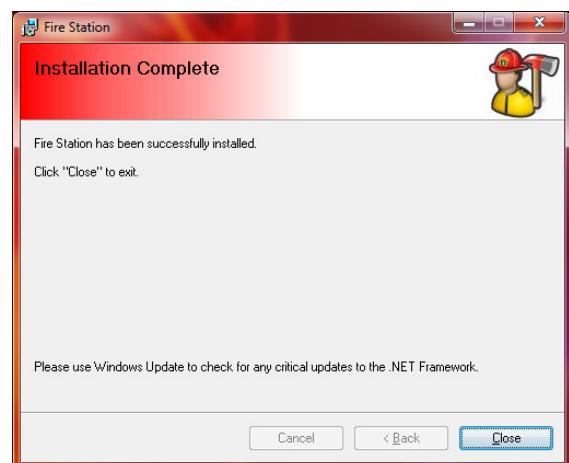

Click **Next** unless you want to install **Fire Station** in a location other than the default location.

Click **Next**.

Click **Close** to finish the installation.

Fire Station www.firestationsoftware.com

An affordable easy to use record keeping computer program for your fire department

Step 3: Install services

If you've purchased the **Apparatus Checks** module or the **Expiration Date Tracking** module, the installation files for the Windows services that those modules require are included in the .ZIP file.

<input checked="" type="checkbox"/>	ApparatusCheckNotificationService	File folder
<input checked="" type="checkbox"/>	ExpirationDateNotificationService	File folder
	[Content_Types].xml	XML File
	FireStationSetup.msi	Windows Installer Package
	FS%20Software%20License%20Agree...	Adobe Acrobat Document
	FS_Quick_Start.pdf	Adobe Acrobat Document
	setup.exe	Application

These services are programs that run in the background. The **Fire Station Apparatus Check Notification Service** sends out emails and reports for the Apparatus Checks module. Examples include reminder emails to complete a check on the schedule or to send the weekly apparatus problems email.

The **Fire Station Notification Service** sends out emails when items in the **Expiration Date Tracking** module are nearing their expiration dates or have expired.

The service(s) are installed the same way that **Fire Station** is. Right-click on the setup.exe in the service subfolder and select **Run as administrator** and follow the wizard to install it.

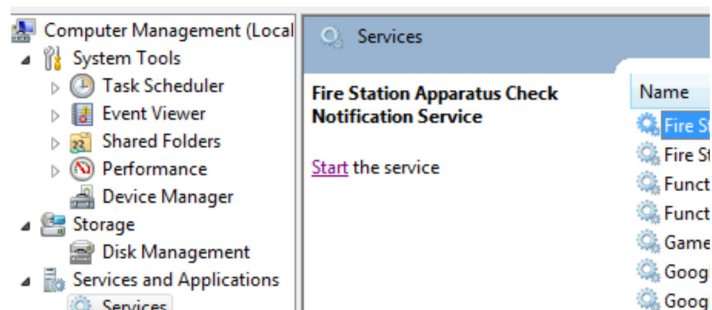

NOTE: You only need to install these services on one PC.

When the services are first installed, they are not set to automatically run as **Fire Station** requires setup of apparatus, groups, schedules, items to track, etc.

Once you have **Fire Station** setup, you can set the services to automatically start by configuring the services. The easiest way to do this is to click **Start** and right-click on **My Computer** (Windows XP) or **Computer** (Windows 7, 8) and select **Manage**.

Expand **Services** and find the services in the list. Right-click on the service name and select **Properties**.

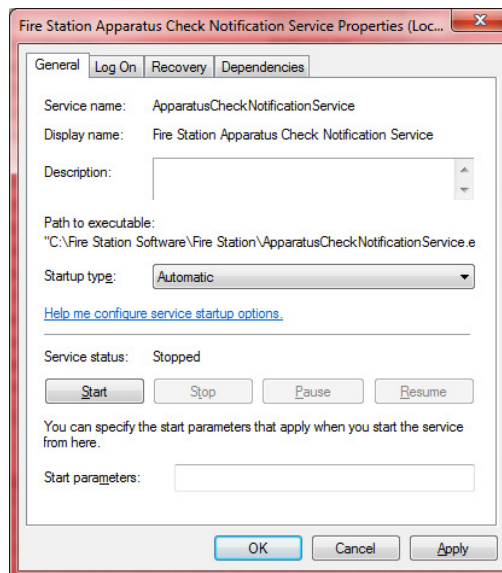

Fire Station www.firestationsoftware.com

An affordable easy to use record keeping computer program for your fire department

Change the **Startup type**: to **Automatic** and click **OK**. You can then click **Start** in "Start the service".

Step 4: Run **Fire Station** for the first time

Start **Fire Station** by clicking on the shortcut on your Desktop.

Log in by choosing your name from the list or typing your ID number in the **Name** box and pressing Enter.

If this is the first time logging into **Fire Station**, you will be prompted to enter a password. This will be your password from now on.

Every 30 days, **Fire Station** will remind you to back up your data. This reminder will appear every time you start the program until the backup is done. Fire Station Software recommends that you back up your data to an external drive, network drive, or flash drive so that if your computer's hard drive fails, you will not lose all of your data.

Fire Station www.firestationsoftware.com

An affordable easy to use record keeping computer program for your fire department

Step 5: Configuring **Fire Station**

To configure **Fire Station**, expand the **Admin** section and select **Manage Settings**. If you don't see **Manage Settings** in the **Admin** section, you do not have the permission to access it. See the **Permissions** section below.

There are several tabs in **Manage Settings**. The first is **My FD**. The **My FD** tab is where you configure the department name, address and phone as well as the department logo and program color preferences. Latitude and Longitude can be acquired by using **Google Maps**.

To get latitude and longitude in Google Maps, log into Google Maps and enable the **LatLng Marker** tool in **Maps Labs**. You can access **Maps Labs** by clicking on **Maps Labs** in the bottom left corner.

Enable these tools and click **Save Changes**.

You can now zoom into an area in **Google Maps** and right-click on the map and select **Drop LatLng Marker**.

This technique will be helpful for getting latitude and longitude for locations in the **PrePlanning** module.

The **Email** tab is where you configure the email account that will send emails from the program. Emails are sent when an apparatus problem is reported, when an apparatus check is due, when items are about to expire, etc. The default (FSSAlerts) account is there as an example, you will need to use an account that you own.

The **Apparatus Checks** tab is where options for the **Apparatus Checks** module are configured.

of Days Between Checks is used when creating the schedule. It is the number of days given for a group to complete the check.

Send Apparatus Check Reports, when checked, will send an accountability email each schedule period summarizing which groups got their checks done. You can assign a notification group to get this email as well.

Send Apparatus Problems Report, when checked, will send an email with all unresolved apparatus problems each schedule period. You can assign a notification group to get this email.

Assign Problems To can be set to a single person so that all reported apparatus problems are assigned to that one person. If this is not set, then problem is assigned to the person in the apparatus check group with the highest rank.

Completed Color, Past Due Color and Current Week Color are the colors that appear on the Apparatus Checks schedule when it is created.

The **Expiration Date Tracking** tab is where you set the interval for the **Expiration Dates Notification service** to check for expired items. By default, this is set to once every 24 hours. This means that once a day, the service will check if any items are about to expire and if so, send an email.

Fire Station www.firestationsoftware.com

An affordable easy to use record keeping computer program for your fire department

The **Database** tab is where you configure how **Fire Station** finds the database it should open.

If **Local Access** is selected, **Fire Station** looks in the current folder for the FireStation.mdb database.

If **Network Access** is selected, **Fire Station** will open that specific database. Use the browse button (...) to find the FireStation.mdb. This is useful to share data between two or more computers. See the **FAQ** page on the www.firestationsoftware.com website for more information on data sharing.

If **SQL Server** is selected, **Fire Station** will open the SQL database specified by **Server**, **Database**, **Username**, and **Password**.

If **MySQL** is selected, **Fire Station** will open the MySQL database specified by **Server**, **Port**, **Database**, **Username**, and **Password**. This server can be local or in the Cloud. Fire Station Software offers Cloud database hosting. Contact sales@firestationsoftware.com for more information.

Step 6: Configuring Personnel

To configure department ranks, expand the **Personnel** section and select **Manage Ranks**. If you don't see **Manage Ranks** in the **Personnel** section, you do not have the permission to access it. See the **Permissions** section below.

Here you can add, edit, or delete ranks. Depending on **Incident Reporting** invoicing options you can edit the **Flat Rate** or **Hourly Rate** (if enabled).

Be careful adding ranks as the order in which they are added is the order in which they will be displayed in **Fire Station**.

To configure personnel, expand the **Personnel** section and select **Manage Personnel**. If you don't see **Manage Personnel** in the **Personnel** section, you do not have the permission to access it. See the **Permissions** section below.

Fire Station www.firestationsoftware.com

An affordable easy to use record keeping computer program for your fire department

Here you can add, edit, or delete department personnel.

This includes their **General** information, **Certifications**, **Emergency Contacts**, **Immunizations**, **Employer**, **Insurance**, **Medical Preplan**, **Uniform Sizes**, **Background Check**, **Personal Inventory**, **Files**, and **Notes**.

Step 7: Configuring Permissions

To configure permissions, expand the **Admin** section and select **Manage Permissions**.

Select the person you need to change permissions for from the tree and go through each tab and check the applicable permissions. Make sure you click **Save**.

There are three preset permission sets; **Admin**, **Officer**, and **Firefighter**. You can click on any of those to quickly set the permissions for an individual.

Admin gives all permissions.

You can also create your own permission sets. Select **Manage Permission Groups** from the Admin menu.

Fire Station www.firestationsoftware.com

An affordable easy to use record keeping computer program for your fire department

Enter a **Group Name** and click **Save**.

You can now click on the group name in the tree and assign permissions on each tab. Click **Save**.

Go back to **Manage Permissions**, select the person in the tree, pick the permission group, and click **Apply**. Be sure to click **Save**.
